Support Considerations:

- To determine operating system support for the Guest OS Customization feature on VMware Cloud on AWS (VMC) you must know the version of vCenter in the environment or the SDDC version and use the following document to determine the vCenter version: [Correlating VMware Cloud on AWS with Component Releases](#).
- The operating system release must also be supported as a Guest OS by the ESXi host, which can be determined in the [Broadcom Compatibility Guide](#).
- Unless stated otherwise, all operating system editions and 32-bit/64-bit variants are supported.
- Unless specified otherwise, all operating system service packs, minor or maintenance versions are supported.

Key:

No = Not supported

Yes = Supported

Yes¹ = Supported from Update 1 or X.Y.1 version on VMC

Yes² = Supported from Update 2 or X.Y.2 version on VMC

Yes³ = Supported from Update 3 or X.Y.3 version on VMC

Yes^{3b} = Supported from Patch U3b

Support Notes:

- (a) Guest Customization of Nano Server is not supported.
- (b) vCenter 6.5 is the last release to support Guest Customization for Windows Server 2003 and Windows XP. However, ESXi 6.5 is not the last release to support running Windows Server 2003 and Windows XP. For more details on ESXi support of guest operating systems see the [Broadcom Compatibility Guide](#).
- (c) Guest OS Customization of SLES does not support NetworkManager, requires use of Wicked.
